

Dr. Avi Islur Surgery

Thigh Lift Post Operative Care Instructions

Rest + Relaxation

- When resting, lie preferably on your back with your legs straight or slightly bent at the knee and elevated on a pillow
- It is okay to lie on your chest.
- Preferably do not sleep on your side.
- Take 10 big deep breaths every hour while awake for

Leg Movements + Clothing

- It is important to walk after surgery but do not walk excessively.
- Do not perform squats or abduct the thighs. (Separate legs more than 60 degrees) for 2 weeks
- Wear loose fitting clothing
- Do not wear jeans or pants that may cause friction on the incision line.

Washing + Wound Care

- Remove all loose dressings 72 hours after surgery or once drains removed. Leave tape that is applied to your skin intact until it falls off or is easy to peel off.
- It is ok to wash all non-operated sites 24 hours after surgery with a wash cloth.
- You can shower your legs 3 days after your surgery.
- Dry surgical site by gently patting with a clean towel or allow to air dry.
- Do not soak surgical sites
- No baths, pools, hot tubs, or lake water for 6 weeks.
- Apply Polysporin (original ointment) to your incision lines 2x a day once steri-strips are removed.
- Wear your compressive garments for 3-4 weeks
- Make sure drains are not tangled under compression garment
- Bleeding from your surgical site may occur following surgery. If it occurs hold constant firm pressure for 10 minutes with a clean towel.

Medication

- Anti-Pain medication can be taken after surgery.
- Resume prescribed medications unless otherwise stated.
- Take antibiotics as prescribed at the appropriate times until completed.

Two Weeks After Surgery

- Begin to massage your incisions with body lotion, BioOil or scar cream. Do not use 100% vitamin E.
- Massage any areas where liposuction was performed to soften tissue.
- If your incisions are going to be exposed to the sun, apply SPF 45 or higher for at least one year to prevent tanning.

Drain Care

- If drains have been placed, please contact clinic location where you saw Dr. Islur to have drains removed when the output is less than 30ml/24 hours
- When drains are removed a small amount of yellow/pink/ blood tinged fluid may ooze out of drain site for up to 3 days.
- Place a small amount of Polysporin onto drain site daily and cover with gauze or a feminine hygiene pad.
- Drain site will close in 3 to 7 days
- If drainage persists or is predominantly fresh blood go to your nearest emergency department and contact Dr. Islur.
